"Mathematical Analysis of the Rectifier-Type Frequency Converter"

Novosibirsk, Izvestiya Sibirskogo Otdeleniya Akademii Nauk SSSR (News of the Siberian Division of the Academy of Sciences SSSR), No 6, 1966, pp 84-97.

Abstract: The article deals with the rectifier-type frequency converter; this is a device which finds increasing application in converting power-line frequency to 500-1000 Hz. The system described here has a stiff external characteristic and produces a nearly sinusoidal output voltage; it operates over a wide range of loads and that includes no-load, which is impossible with other known systems, as well as regeneration i.e. pumping energy back into the line. The analysis begins with the no-load condition, whereby both the single-phase and the three-phase versions are considered; the formulae are later modified to account for the presence of a resistive and inductive load. Calculations are made by the method of harmonic components and, thus, the distortion of the output waveform is shown to be insignificant even at no-load; consequently, it is not necessary to consider the higher harmonics in these calculations. In addition, the plate current and the peak-inverse-voltage are determined, also the recovering time of the rectifier; namely, the time it takes for the rectifier to resume control

TITLE: Machine for Testing the Fatigue of Clamped Specimens in
Pure Bending
PERIODICAL: Zavodskaya laboratoriya, 1961, Vol. 27, No. 1, p. 85

TEXT: The machine is schematically shown in a figure. The test specimen is held at one end by the clamps of a rotating spindle. The free end is subjected to a bending moment of the same magnitude as the reactive moment in the clamps, but with opposite sign. Under the action of these two moments, the specimen is subjected to pure bending. The machine is attached to the frame of a lathe, and permits a simultaneous testing of four specimens at $n = 2550$ rpm. There is 1 figure.

TITLE: Corrosion-fatigue strength of chromium-coated steel

PERIODICAL: Metallovedeniye i termicheskaya obrabotka metallov,
no. 1, 1963, 21 - 23

TEXT: 226 mm long specimens with a 60 mm long, 8 mm dia. gauge section of normalized steel (containing 0.51% C, 0.67% Mn, 0.3% Si and 0.013% S) were plated with a 20- μ thick layer of Cr under a tensile stress equalling 7% of the yield point of the material. The fatigue was tested under conditions of pure circular bending with a rotation speed of 2 550 r.p.m. for 10^7 cycles, using a 3% NaCl solution as a corrosive medium. The test results were negative; the fatigue strength of these specimens was even lower than for specimens chromium-plated without applying tensile stress. There are 3 figures.

 TITLE: The effect of hydrogen on the brittleness of steel in the stressed condition
 SOURCE: Vestnik mashinostroyeniya, no. 11, 1965, 61-62
 TOPIC TAGS: hydrogenation, metallography, metal brittleness, brittle failure, rupture test machine, deformation test machine, elongation test machine / RM-500 rupture test machine, K-2 deformation test machine, NG-1-2M elongation test machine
 ABSTRACT: An investigation was made of the effect of hydrogen on the brittleness of steel in the stressed condition. The brittleness criterion used in this study is the so-called static durability method for steel, which implies measurement of the time in minutes for which the specimen is in the stressed condition, commencing with the beginning of hydrogenation and ending with specimen failure. The stress conditions in this study consisted of two modes of deformation: elongation and twisting; the simultaneous action of both of these types of deformation is not included in this study. A brief description of the conduct of the experiments is given. Specimens were prepared from steel wire having an intermediate carbon content. Elongation tests were performed with the use of an NG-1-2M testing machine, twist deformations on a K-2 machine, and specimen rupture on an RM-500 machine. Hydrogenation of the

PREFACE: This collection of reports is intended for scientists and engineers
engaged in the study of automatics.

CONTENTS: The collection contains reports presented at the 6th Conference of
Young Scientists of the Institute of Automatics, 1 (Leningrad) in January
1959. The collection covers a wide range of scientific and technical problems
connected with automatic control. 50 personalities are mentioned. References
accompany each report.

Shubin, A.B. Controller Unit Circuits in Multichannel Automatic Optimal
The author reviews and analyzes various elements of the controller unit of
a multichannel system and discusses the methods of the search for an extremum.
There are 3 references, all Soviet.

PART II. AUTOMATIC CONTROL

Gubinskiy, I.E. Control of Specific Electric Systems and Geometrical
Transformations of Rectangular Matrices by Means of Relay Circuits 135
The author studies a long, but not linear, nonstationary, conductive sample by
placing it in a high-frequency magnetic field of a coil. The induced
eddy currents create their own magnetic field of a coil. The induced
coil. This results in changes of coil resistance and inductance. The
author obtains mathematical formulas and derives curves connecting the values
of the introduced resistances with the parameters of the induced
magnetic field. He also uses this method for the detection of defects in
metallic bodies. There are 4 references: 2 Soviet, 1 English, and 1 German.

Lobanov, L.V. Some Application of Relay-Effect Components
The author gives a detailed mathematical analysis of the parameters,
characteristics, and operating conditions of components built of materials
possessing considerable piezomagnetic and Hall effects. She also includes
some data on the design of such components to be used in automa-
tic and telemechanical equipment. There are 4 references, all Soviet.

Figure 1. Application of Barrow's Scattered p-Adaptation for the Automatic
Control of the Composition of Composite Media 152
The author discusses certain aspects of the application of reverse
scattered p-adaptation for continuous control of the composition of
the composition of complex media consisting of three or more components.
There are 10 references: 5 Soviet, 4 English, and 1 French.

Pozharov, I.M., M.P. Zhukovskiy, and I.A. Tikhonov. Automatic Potenti-
ometer with Feedback Control of Primary Transducers 160
The authors study the operation of a corrected automatic potentiometer for
estimating the change of thermoelectricity (with time constants up to
15 minutes) for use in automatic control systems. They also conclude that the method which they applied for correcting primary trans-
ducers may be also used for the correction of other types of transducers.
The authors describe by first and second order models of the potentiometer
circuits. There are 5 references: 3 Soviet, and 2 English.

TITLE: Seminar on reliability problems [Reliability Section of the Scientific Council on Cybernetics of the Presidium of the Academy of Sciences SSSR]

SOURCE: AN SSSR. Vestnik, no. 5, 1963, 104

TOPIC TAGS: reliability of systems

ABSTRACT: A seminar on reliability problems has been organized by the Sektsiya nadezhnosti Nauchnogo soveta po kibernetike (Reliability Section of the Scientific Council on Cybernetics) and is now headed by Academician N. G. Bruyevich. Representatives of various scientific research institutes, universities, and industrial establishments in Moscow, Leningrad, Kiev, and other large cities participate. General problems of reliability theory as well as the reliability of elements of engineering systems are studied. Two meetings which took place on 28 January and 25 February 1963 are described. At the first, dealing with problems of structural reliability, three reports

Card 1/2

ACCESSION NR: AP3001623

0

were presented. A. M. Kamyshtnyy investigated the possibility of using the properties of nonlinear volt-ampere characteristics of certain instruments for securing the self-switching-in effect in redundant schemes. The report of A. L. Raykin dealt with estimates of structural communication losses in systems of sequential gathering of information. The report by O. I. Bronshteyn was an evaluation of the probability of the reception of a remote-control message in cases when the equipment of the dispatch point fails and can be restored. The second meeting dealt with reliability problems of elements of electromagnetic devices and with the problem of increasing the reliability of electronic digital computers. From a study of a physical model of electric contacts, Corresponding member AN SSSR B. S. Sot'skov and Candidate of technical sciences I. Ye. Dekabrun determined the probability of the correct operation of such devices. The reliability of a coil of an electromagnetic mechanism was studied in the report of B. S. Sot'skov and Ye. S. Krivorotova; formulas for calculating the reliability of coils were derived. Yu. A. Torgov investigated the reliability of two synchronously operating electronic digital computers with an auxiliary device permitting comparison of the calculation results of computers after each step of program compilation.

TITLE: Reliability of redundant systems with redundant units taken
into account 25

SOURCE: Kibernetika - na sluzhbu kommunizmu v. 2, 1964. Teoriya nadezhnosti i teoriya massovogo obsluzhivaniya (Theory of reliability and theory of mass service), 121-127

TOPIC TAGS: redundant system reliability, hot redundancy, cold redundancy, failure free operation probability

ABSTRACT: The reliability of two-unit redundant systems with a finite number n of redundant units is analyzed under the assumptions that the time of failure-free operation and the time necessary for detecting failure and for replacing the failed unit are random values distributed according to an exponential law. The cases of hot and cold redundancy are considered. In both cases, expressions are derived for the probability of the failure-free operation of such redundant

Card 1/2

L 21791-65

ACCESSION NR: AT5002482

systems, taking the redundant units into account. In the case when $k = \theta < 0.02$, where θ is the mean down time and T the mean time of failure-free operation for one unit, approximate formulas for determining the reliability of such redundant systems are presented. The derived formulas can also be used for determining the number of redundant units needed to assure the required reliability of the redundant system. Graphs representing the dependence of the reliability of the redundant system on λt ($\lambda = \frac{1}{T}$), k , and n are plotted for the cases of hot and cold redundancy. The expediency of using hot or cold redundancy is analyzed. Orig. art. has: 4 figures and 12 formulas.

 ABSTRACT : Description of results of many years of
 work on introduction of nut-bearing plants at the school
 of experimental forestry "Les na Vorskle" (Belgorodskaya
 oblast'). Growing of walnuts (*Juglans regia* L.) from seeds
 of local origin has made it possible to obtain trees that
 sustain little frost injury. Black walnut (*J. nigra* L.)
 is subject to some frost damage while the tree is young,
 but becomes more resistant with increasing age. White
 walnut (*J. cinerea* L.) is entirely hardy. Manchurian
 walnut (*J. manshurica* Max.) is completely winter-hardy
 but is periodically damaged by drought. It can be grown
 extensively, as a forest crop, on sandy loams. Siebold's
 walnut (*J. Sieboldiana* Max.) is sufficiently resistant to

TITLE: Continuous Fermentation and Breeding of Microorganisms
(Nepreeryvnoye brozheniye i vyrashchivaniye mikroorganizmov)

PERIODICAL: Vestnik Akademii nauk SSSR, 1959, Nr 2, pp 106-108 (USSR)

ABSTRACT: The Institut mikrobiologii Akademii nauk SSSR (Microbiological Institute of the Academy of Sciences, USSR) convened a conference from October 13 to 15, 1958 which dealt with the investigation of some working results in this field as well as with the discussion of a further intensification of the productions basing on the activity of microorganisms. The conference was attended by more than 200 representatives of academic and scientific branch research institutes, enterprises, sovkhoses, universities, as well as foreign scientists. The following lectures were heard:
N. D. Iyermolinskii spoke of the theoretical foundation of the method of continuous microbe breeding and its prospects of application in the microbiological industry.
Ye. A. Plevako, Vsesoyuznyy nauchno-issledovatel'skiy institut khlebopekarnoy promyshlennosti (All-Union Scientific Research Institute of Bread-Production Industry) dealt with the problem of the breeding of yeast in solutions containing molasses.
P. M. Fisher, K. P. Andrazar, V. A. Utenkova, M. Ya. Kaluzhnyy and A. P. Kyruchkova, Vsesoyuznyy nauchno-issledovatel'skiy institut gidrolisnoy i sul'fitno-spirovoy promyshlennosti (All-Union Scientific Research Institute for the Industry of Hydrolysis and Sulfite Spirits) evaluated the theoretical and practical work in the field of continuous fermentation of wood hydrolysates and sulfite liquor as well as their utilization for obtaining fodder yeast.
Ye. I. Mamsova, Krasnoyarskiy gidrolisnyy zavod (Krasnoyarsk Hydrolysis Plant) said that the introduction and completion of the continuous process of yeast breeding made it possible to increase the output of yeast factories by ten times.
V. L. Yamsenko, A. L. Malchenko, Vsesoyuznyy nauchno-issledovatel'skiy institut spirtovoy i likero-vodochnoy promyshlennosti (All-Union Scientific Research Institute of the Spirit, Liquor and Brandy Industry), V. M. Makhmurevich, Dzhukhominakaya Scientific Research Laboratory reported on the experiment of applying the method of continuous fermentation

Card 1/4

Continuous Fermentation and Breeding of Microorganisms NOV/30-59-2-AR/60

of the starchy raw material and syrup in the alcohol and acetone-butanol industry.

S. A. Kononov, All-Union Scientific Research Institute of the Alcohol, Liqueur and Brandy Industry reported on the problem of antiseptics in fighting infection due to ferments.

L. Ya. Madzinskaya, Institut mikrobiologii Akademii nauk USSR (Microbiological Institute of the AS USSR) reported on the investigation of the morphological and physiological properties of yeast.

A. D. Kozalanka, Andrushevskiy spirtovoy zavod (Andrushevka Distillery), M. Ya. Fayzhanov, Malo-Viskovskiy spirtovoy zavod (Malo-Viskovskiy Alcohol Distillery), M. R. Makarova, Omslenkiy Sovmarkhoz (Omslenok Sovmarkhoz) reported on some working results obtained by distilleries in the syrup fermentation by using the method of continuous flow.

M. S. Loytianskaya, Leningradskiy universitet (Leningrad University) characterized the correlation of reproduction processes and biochemical activity of acetic acid bacteria in the high-speed production of vinegar.

M. M. Heronova, Microbiological Institute of the AS USSR spoke of the possibility of obtaining vitamin B₁₂ by continuous breeding of propionic acid bacteria (propionovokisluyye bakterii). S. L. Brinberg, O. I. Grabovskaya, Vsesoyuznyy nauchno-issledovatel'skiy institut antibiotikov (All-Union Scientific Research Institute of Antibiotics) reported on the application of this method in the production of penicillin.

V. V. Yankina, All-Union Scientific Research Institute of the Spirit, Liqueur, and Brandy Industry showed that the method of semi-continuous breeding of the fungus *Aspergillus niger* accelerates fermentation. B. V. Perfil'ev, Leningrad University reported on the results of investigations of the natural microflora by the method of capillary microscopy which he had developed.

V. A. Kamigawa, Kiev University demonstrated his new batcher for continuous breeding of microorganisms in laboratory practice.

V. Vintik and Z. Radica (Czechoslovakia) expressed their opinions on the methods of continuous breeding of microorganisms.

On this Conference it was pointed to the necessity of organizing the industrial production of cultures for continuous fermentation.

AUTHOR: Grabovskaya, R. G.

TITLE: On the extension of the class of ordinary differential equations of first order with quasianalytic solutions

PERIODICAL: Referativnyy zhurnal, Matematika, no. 4, 1962, 31, abstract 4B141. (Nauchn. yezhegodnik. Odessk. un-t. Fiz.-matem. fak. i N. -i. in-t fiz., no.2, Odessa, 1961, 53 - 56)

TEXT: Considered is the differential equation

$$\omega' = \frac{P_n(\omega, z)\omega^n + \dots + P_1(\omega, z)\omega + zP_0(\omega, z)}{z^2[Q_0(\omega, z) + Q_1(\omega, z)\omega + \dots + Q_k(\omega, z)\omega^k]}, \quad (1)$$

where $P_i(\omega, z)$ and $Q_i(\omega, z)$ ($i = 0, 1, \dots, n$; $i = 0, 1, \dots, k$) are analytic with respect to ω and z , regular for $0 \leq |z| \leq r$ and $0 \leq |\omega| \leq \rho$, $P_0(0, 0) \neq 0$, $P_1(0, 0) \neq 0$, $Q_0(0, 0) \neq 0$. Let L be a curve which nowhere intersects with itself in the complex z -plane, and there hold on it:

Card 1/4

On the extension of the class...

S/044/62/000/004/020/099
C111/C444

$$z = x(t) + iy(t), \quad t \geq 0;$$

$$x(t) = t[l_1 + \varphi_1(t)], \quad y(t) = t[l_2 + \varphi_2(t)]; \quad (2)$$

$$l_1^2 + l_2^2 = 1; \quad l_1, l_2 = \text{const.}$$

where $\varphi_1(t)$ and $\varphi_2(t)$ for $t \in [0, A]$ possess continuous first derivatives (A is a positive number so large that for $t \in [0, A]$ the condition $0 \leq |z(t)| \leq r$ is satisfied). There denotes

$$\frac{a_1^0}{b_0^0} = \frac{P_1(0, 0)}{Q_0(0, 0)} = p + is.$$

Without a proof the following results are formulated:

1.) If one searches the solution of (1) formally as a series

$$\omega = \sum_{m=1}^{\infty} c_m z^m, \quad (3)$$

then the coefficients c_m , $m \geq 1$ can actually and thereby uniquely

Card 2/4

On the extension of the class...

S/044/62/000/004/020/099
C111/C444

be determined.

2.) Let $\lim_{t \rightarrow 0} \varphi_1(t) = 0, \lim_{t \rightarrow 0} \varphi_2(t) = 0. \quad (4)$

a) For sufficiently small $t, 0 < t \leq t_1 < A$, there exists on the curve L_1 which satisfies the condition $p_1 + s_1 > 0$, an infinite set of solutions $\omega_L^{(0)}(z)$ of (1) which for $0 < t \leq t_1$ are regular on L , and asymptotically representable by (3). Besides for each function $\omega_L^{(0)}(z)$, corresponding to the given curve L , one can give a circular sector C_L with the center in $z = 0$ and the radius $\eta > 0$ such that $\omega_L^{(0)}(z)$ is regular in the sector and asymptotically representable by the series (3), where C_L encloses a certain arc of L which corresponds to the variation of t in the interval $[0, t_0]$, where

$0 < t_0 \leq t_1.$

b) For sufficiently small $t, 0 < t \leq t_1$, there exists on L_1 which

Card 3/4

S/044/62/000/004/020/099
C111/C444

On the extension of the class...

satisfies the condition $pl_1 + sl_2 < 0$, one and only one solution $\omega_L^{(0)}(z)$ of (1) which on L is regular for $0 < t \leq t_1$ and asymptotically representable by (3). Besides one can give a circular sector D with the center in $z = 0$, radius $\eta > 0$ and a central angle $< \pi$ such that the function $\omega_L^{(0)}(z)$ is regular inside of the sector and asymptotically representable by (3), where D encloses a certain arc of L which corresponds to the variation of t in the interval $(0, t_0)$, where $0 < t_0 \leq t_1$. ✓

3.) If (3) is convergent, then there exists one and only one solution of (1) which is regular in the neighborhood of $z = 0$.

TITLE : An Experiment in Dehelminthization of Arctic Foxes

ORIG. PUB. : Krolikovodstvo i zverovodstvo, 1958, No 5, 31

ABSTRACT : A good anthelmintic effectiveness of arecoline hydrobromide against the broad tapeworm, Tokocarae, and Tokascarides in Arctic foxes is reported. The preparation was introduced in the form of a 2% solution in a dose of 2 ml., which equals about 10 mg/kg.

| <p>Investigation of the Curves of Magnetisation of Nickel Subjected to a Tensile Load at Low Temperatures. M. Grabovskiy (Zhur. Eksp. i Teoret. Fiziki (J. Exper. Theoret. Physics), 1939 9, (2), 180-188).- (In Russian.) The magnetisation curves were obtained for nickel subjected to tensile loads of 7, 11, 14.2 and 17.35 kg./mm.² at room temperature and at the temperatures of liquid oxygen and liquid nitrogen. A break between the curvilinear and straight-line portions of the magnetisation curves was observed. The curvilinear portion of the curve corresponds to the inversion process, while the straight-line portion corresponds to the process of rotation. - N.A.</p> | | | | | | | | | | | | | | | | | | | |

Article records the results obtained in experiments conducted in 1941 at the Magnetic Laboratory of the Moscow State University. G. M. Iyakhov was a fellow collaborator in these experiments. Author discusses the conditions surrounding the experiment and the sequence in which it was carried out. Briefly describes the results of the experiments and the conclusions which were reached.

As a result of the experiments the author was able to
 draw several conclusions. The magnetization curves of
 distorted nickel samples varied proportionally with an
 increase of the anisotropic constant. Also makes ref-
 erence to an article submitted by N. I. Bryukhator at

a Physical Conference and which contained the same
 conclusions as those obtained by Grabovskiy. He
 noticed that a sharp cooling of the distorted nickel
 sample has a very great effect on the character of
 the magnetogram.

"Variation of the Magnetic Properties of Magnetite Under Mechanical Pressure," M. A. Grabovskiy, 71 pp

"Iz Ak Nauk SSSR, Ser Geog i Geofiz" No 2

Variation of magnetic properties of ferromagnetics under mechanical pressure was first observed by Villari in the past century. Much experimental work has been devoted to this study since then. Magnetic properties of various ferromagnetics were studied under influence of stretching, compression, etc. Assumes that magnetization of magnetite and, consequently, outer magnetic field around them, will vary, if rocks, i. e., magnets, are subject to deformations as a result of seismic fluctuations and tectonic displacements. Present aim is to clarify the extent of influence of similar deformations on magnetic properties of magnetic rock samples from "Vysokaya Gora." Experiments showed that magnetic force of the magnet decreases with increase in pressure. Gives three diagrams of experimental results and three illustrations of mechanical pressure system. Submitted 20 May 48.

Shows experimentally that magnetite is complex
substance in relation to electricity. Its con-
ductivity has the character of semiconductor and
its resistance decreases during magnetization.
Latter effect is analyzed in relation to ferro-
magnetism. Author was assisted by advice of Prof

Text Data

Coverage: The text describes a large number (117) of physical experiments with 140 diagrams and pictures of the apparatus used in the physical laboratory of Moscow State University for illustrating the lectures in the course in physics of mechanical vibrations, waves and sound. The experiments in the text are grouped in 16 sections.

1/2

Lektsionnyye demonstratsii po fizike. Vypusk 7
Kolebaniya i volny

AID 371 - I

While apparently nothing new or not known is covered by the text, of certain interest is the detailed description of E. V. Bogoslovskiy's apparatus. This device demonstrates the regularity and interference of capillary surface waves in a liquid of small viscosity (acetone) and the effect of changing depths on the waves, etc. Of interest are also the references to the books of A. V. Shubnikov Piezoelectric Structure (1946) and of V. A. Krasil'nikov Sound Waves (1951), and to L. Polevoy's article on piezovibrators ("Radio", No. 1, 1947).

Purpose: The book is dedicated to teachers and assistants in the physical university laboratories and may be of use for teachers in schools.

Facilities: Moscow State University

No. of Russian and Slavic References: 18 in footnotes and 7 in bibliography

Available: A.I.D., Library of Congress.
